

Care, comfort, and safety for our volunteer patients

MCB Clinical Research Centers has a friendly and professional environment that upholds to the highest standards of quality research.

PROVIDING OPTIONS THROUGH CLINICAL TRIALS

MCB Clinical Research Centers is dedicated to providing clinical trial opportunities in the Colorado Springs area. Our doctors and staff are dedicated research specialists that have a combined 80+ years of clinical research experience.

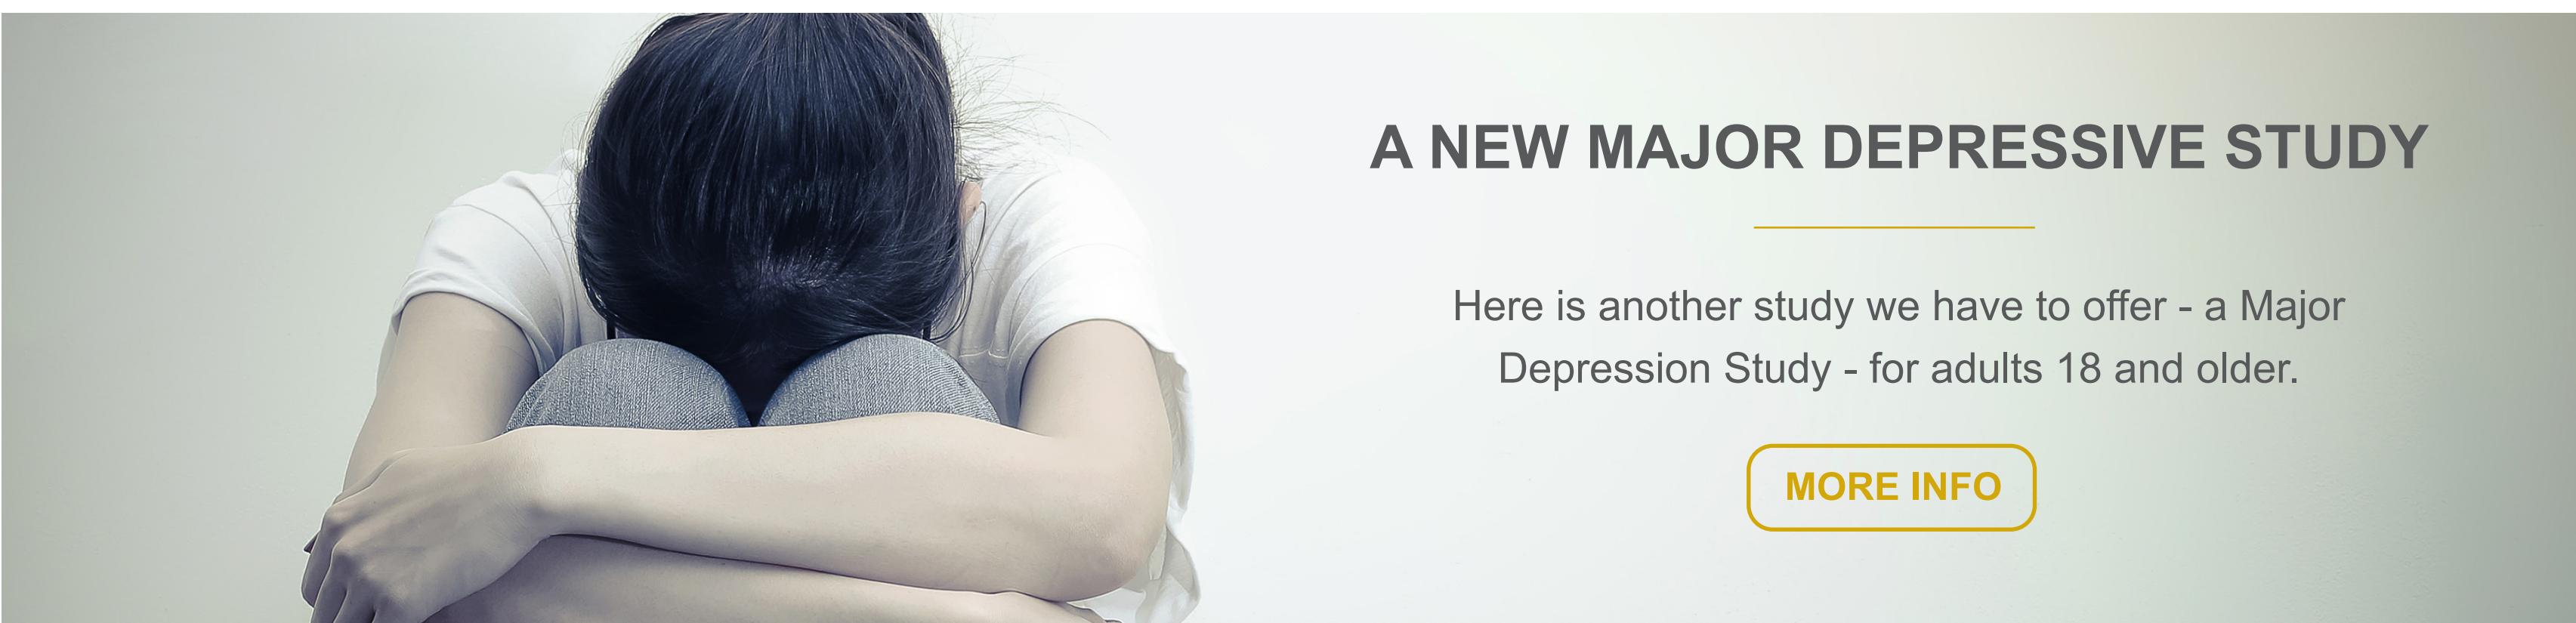

We specialize in Phase I – IV trials covering multiple therapeutic indications, including healthy volunteers.

A NEW MAJOR DEPRESSIVE STUDY

Here is another study we have to offer - a Major Depression Study - for adults 18 and older.

[MORE INFO](#)

WHY ARE CLINICAL TRIALS IMPORTANT?

Without clinical trials, the advancement of medicine isn't possible. Clinical trial volunteers play an important part in the development of medicines, medical devices, vaccines, etc. Choosing to participate in a clinical trial is an important personal decision, and there are resources available to answer any questions you may have.

[CLINICAL TRIAL FAQS](#)

HOW WE BEGAN

MCB Clinical Research Centers, LLC (MCBCRC) is named after my grandmother, Marie Claire Bossaert. In 1985 she was diagnosed with colon cancer and given 3-6 months to live. She was told to "take care of your affairs" and the doctor walked out of the room.

After hearing this we researched the disease and found out about clinical trials available for her. She went on multiple studies and lived for 6 years. During this time she met three more grandchildren, learned how to ski and traveled to Europe. She passed away on February 17, 1991.

Since she passed away it has been our goal to ensure patients have access to clinical trials in lieu of "taking care of their affairs".

Kristin Scalva -President

We promote quality of life for ourselves and others through the work that we do.

OUR FACILITY

MCB Clinical Research Centers is a multi-therapeutic Phase I-IV clinical trial site located in Colorado Springs, CO. We have access to a community of over 500,000 residents, including multiple Universities and Military Bases.

For more than ## years, we have been committed to providing our patients with an exceptional research experience given with care and respect.

GLAUCOMA

Glaucoma is a condition that causes damage to your eye's optic nerve and gets worse over time. It's often associated with a buildup of pressure inside the eye.

Glaucoma tends to be inherited and may not show up until later in life.

STUDIES ARE ENROLLING NOW

FAQS

The following frequently asked questions provide detailed information about clinical trials. In addition, it is often helpful to talk to a physician, family members, or friends about deciding to join a trial.

INTERESTED IN A STUDY?

There are a few trials you may be interested in, but there are still some questions you may need answered.

After identifying some trial options, the next step is to contact the study research staff and ask questions about specific trials.

[LET US KNOW](#)

WHAT IS A CLINICAL TRIAL?

A clinical trial is a research study conducted in people to evaluate a new investigational medical drug or device. The purpose of clinical trials is to find new and improved methods of treating different diseases in the future.

WHAT IS A CLINICAL INVESTIGATOR?

A clinical investigator is a medical researcher conducting a research study. Researchers are usually doctors, nurses, pharmacists, or other medical professionals.

ARE CLINICAL TRIALS SAFE?

Clinical research studies are typically conducted by a trained medical professional. An Institutional Review Board, or IRB, reviews all clinical studies. This is a committee made up of doctors, ethicists, and members of the general public and administrators. This group helps to ensure that the rights of research participants are protected. Your regular doctor is responsible for your well-being and you may want to speak with your doctor before agreeing to participate in a study as there are risks associated with taking any drug or using any investigational medical device. Whenever you agree to enter a study, you are given the name and telephone number of a contact in your study physician's office who will answer your questions as well as a contact for the IRB whom you can contact if you have questions or concerns.

WHY DO PEOPLE PARTICIPATE IN CLINICAL TRIALS?

There are many reasons people take part in research studies. It gives individuals a chance to receive investigational study drugs or medical devices not available to the public. Studies are performed to test if the investigational study drug or device works, and if it is safe.

Often, the process of collecting information in the study will allow the study doctor to find out more about the disease and its effects.

Lastly, a study may not benefit participants directly, but the information gathered may be of help to other individuals in the future with the same condition. Many study participants derive satisfaction knowing they may be a part of the effort to potentially reduce the suffering of other people in the future.

TESTIMONIALS

“ MCB Research is a highly organized and knowledgeable clinical research site with extremely dedicated research professionals. Their investigators are quick to respond to Sponsor requests. This is a high enrolling site and they do not compromise the quality of their data collection and documentation, and they consistently have low data entry error rates. I have had the pleasure of working with them for the past year and they are very experienced and dedicated study coordinator with a highly developed capacity for protocol understanding, study execution and they consistently maintain regulatory compliance. I would be honored to work with this site in the future due to their superior quality, high ethical standards and ability to meet study timelines. ”
